PROFESSIONAL SUMMARY

Full-Stack Developer with proven experience building and shipping production-ready web applications using NestJS, TypeScript, Node.js, PostgreSQL, React.js, and Next.js. Demonstrates strong backend fundamentals in REST API design, JWT authentication, RBAC, and database architecture. Brings an additional dimension of technical leadership — having designed curriculum for and trained 50+ developers in full-stack engineering at an accredited institution. Completed a structured SIWES industrial placement before graduating with a Second Class Upper in Computer Science (FUNAAB, 2024). Actively building toward a mid-level backend or full-stack engineering role, with current focus on test-driven development (Jest), CI/CD automation, and advanced NestJS patterns.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript
Backend: Node.js, Express.js, NestJS, REST APIs, JWT Authentication, RBAC, MVC Architecture
Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS
Databases: PostgreSQL, MongoDB, MySQL, Sequelize
Testing: Jest (unit & integration testing) — actively expanding coverage
DevOps & Tools: Git, GitHub, Docker, CI/CD Pipelines, Postman, Agile/Scrum, Remote Collaboration
Learning now: Redis, Swagger/OpenAPI, GitHub Actions, WebSockets

EXPERIENCE

Web Development Instructor | SQI College of ICT — Abeokuta, Nigeria
January 2025 – Present

- Led curriculum design and full-stack training for 50+ students across frontend and backend development tracks (HTML/CSS, JavaScript, React.js, Node.js, MongoDB).
- Architected project scaffolds and real-world application structures used as foundations for student portfolio work, reinforcing production-grade coding standards.
- Conducted structured code reviews, debugging sessions, and one-on-one mentorship, improving application quality and backend logic across student projects.
- Introduced and enforced Git/GitHub workflows, RESTful API design principles, and Postman-based API testing in collaborative team environments.
- Delivered Agile-aligned, milestone-driven project cycles — preparing students for real engineering team expectations.

Full-Stack Developer — SIWES Industrial Placement | SQI College of ICT — Abeokuta, Nigeria
August 2023 – January 2024 *(Mandatory SIWES university industrial training — returned to FUNAAB to complete final year upon completion)*

- Developed responsive full-stack web applications using React.js, Node.js, Express.js, MongoDB, and JavaScript within a structured team environment.
- Built RESTful APIs with CRUD operations, input validation, JWT authentication flows, and role-based protected route handling.
- Implemented backend features including user authentication systems, relational and document-based database schemas, and third-party API integrations.

- Collaborated using Git/GitHub for branch management, feature development, code review, and milestone delivery across team projects.
- Improved frontend performance and UX through reusable, component-based React architecture and responsive design implementation.

SELECTED PROJECTS

Learning Management System *Next.js · Node.js · Express.js · MongoDB · Tailwind CSS · JWT · RBAC*

- Built a full-stack LMS enabling student course enrollment, instructor content management, and role-based dashboards for three distinct user types.
- Designed RESTful APIs for course management, user authentication, content delivery, and enrollment workflows with protected routes and session handling.
- Implemented reusable UI components and responsive layouts with Next.js and Tailwind CSS; architecture supports clean separation of frontend and backend concerns.

Live Demo: learning-management-system-ten-bay.vercel.app
Frontend Repo: github.com/AbiolaDave/learning-management-system
Backend Repo: github.com/AbiolaDave/LMS-backend

EventTrackPro *React.js · Node.js · Express.js · MongoDB · JWT*

- Developed a full-stack event management platform for creating, managing, and tracking events with attendee registration and schedule management.
- Built backend APIs for authentication, event CRUD, attendee management, and event tracking with database persistence and protected operations.
- Integrated authentication systems, protected routing, and relational-style data workflows within a document-based MongoDB schema.

Backend Repo: github.com/AbiolaDave/EventTrackPro-Backend

EDUCATION

B.Sc. Computer Science — Second Class Upper | Federal University of Agriculture, Abeokuta (FUNAAB)
December 2019 – September 2024

- Graduated with Second Class Upper Honours. Core studies in Software Engineering, Data Structures & Algorithms, Database Systems, Operating Systems, and Computer Networks.
- Completed mandatory SIWES (Students Industrial Work Experience Scheme) placement at SQI College of ICT (Aug–Jan 2023/2024) as part of degree requirements.
